Professional Summary

BTech Computer Science student with strong skills in web development, backend programming, networking, and cybersecurity fundamentals. Experienced in building full-stack applications using Flask, MySQL, and modern web technologies. Completed live internship projects and passionate about applying technical skills to real-world problems. Actively looking for internship or entry-level opportunities in software development, cybersecurity, or system administration.

Experience

Orion Informatics (*Intern*)

Apr 2025 – Jul 2025

- Designed and developed a full-stack web app for invoice file management using Flask.
- Implemented multi-file upload with document mapping, ZIP archiving, and email delivery via SMTP.
- Used HTML, CSS, Bootstrap, SQL, Pandas, and XAMPP for complete backend and frontend integration.

Projects

Voice-to-Code Converter using NLP

Developed an AI-powered **voice-to-code system** that converts natural language voice commands into executable programming code.

- Used **Natural Language Processing (NLP)** to process voice commands and convert spoken instructions into programming constructs.
- Implemented **intent recognition** to identify the user's intended programming action from natural language input.
- Designed the system to be **context-aware**, allowing commands to be interpreted based on the existing code and previous instructions.

Attendance App (Python, XAMPP, SQL, SMTP)

Developed an attendance management application that enables faculty to record student attendance and automatically notify students with low attendance.

- Developed the application interface using **HTML and CSS** for a simple and user-friendly experience.
- Used **XAMPP and MySQL** to manage student records, attendance data, and database operations.
- Implemented attendance percentage calculation to track students' attendance status.
- Integrated **SMTP-based email automation** to send notifications to students with low attendance.
- Designed the system to simplify attendance tracking and reduce manual communication between faculty and students.

Currency Detection Web App – *In Progress*

Developing a computer-vision-based web application that identifies currencies from images and determines their respective denominations.

- Developing an **image classification model** to recognize different currencies from uploaded images.
- Implementing denomination recognition to identify the **value of the detected currency**.
- Using **Python, TensorFlow/Keras, and OpenCV** for image processing and machine learning model development.
- Developing a web-based interface using **React** to allow users to upload currency images and view prediction results.
- Designing categorized results to provide clear information about the detected currency and denomination.

Technical Skills

Languages:	Python, C++, Java
OOP:	C++, Java
Web Dev:	HTML, CSS, JavaScript, PHP
Databases:	MySQL
Tools and Platforms:	Git, VSCode, Cisco Packet Tracer, XAMPP
Non Technical Skills:	Strong analytical skills, Time management, Hard worker

Education

Jyothi Engineering Collge, Thrissur

B.Tech in Computer Science

Nov 2022 – Jul 2026

CGPA: 7.42/10

St. Mary's E.M. School, Kozhikode

Class 10 (ICSE): **94.50%** Class 12 (ISC): **82.50%**

Certifications

- Academor Web Development Course:** 2 months (HTML, CSS, JS).
- Js and ReactJs Bootcamp:** 7 days.
- Proficient in **Excel** (pivot tables, formulas) and **Power BI** for interactive dashboards and business insights.
